We are aware the media has been notified that an incident occurred at the Silfab Solar Fort Mill facility today.

Here is a statement from Silfab Solar that you can attribute to Greg Basden, Director of Operations:

Silfab Solar can confirm the accidental release of water containing .03 percent of potassium hydroxide at our Fort Mill facility today. We notified York County emergency management per protocol, and they responded immediately. The situation is under control. We are working with our local emergency services and there is no danger to public safety.

Thanks,

Hope
